Solution Benefits

- Up and running in minutes without requiring an onsite visit and provides meaningful insights to your network in hours.
- Learns your network and identifies baselines for your assets, network and users.
- Enforces a set of security policies (e.g. blocked countries, unusual VPN usage) for your network and alerts you when they are violated.
- Can take action automatically by disabling a user or blocking traffic at the firewall.
- Provides a prioritised list of assets that need attention on a continual basis, dramatically improving efficiency and decreasing stress.
- Tracks your Network CyberScore over time so everyone can recognise the positive impact of keeping the network safe.
